

We are glad to announce that [CNPE](#), China Nuclear Power Engineering Co. Ltd., the leading EPC contractor of Nuclear Facilities in China, and [SIMIC](#), an Italian specialist in heavy pressure equipment, high-precision manufacturing and on-site installation, have decided to join forces together and establish a long term collaboration and signed a Contract for ITER SMSA works.

On 9th August 2024, we had the honour to receive [CNPE](#) team in our headquarters in Camerana to sign the agreement, where the parties agreed to establish and maintain a long-term relationship. This contract will set out a framework for a cooperation in relation with civil nuclear power generation in China and in other countries for the development and the peaceful use of nuclear energy with the aim of further strengthening the nuclear safety of the nuclear power stations. As part of this partnership, the two companies will jointly identify and evaluate potential fission or fusion projects suitable for collaboration.

Moreover, [SIMIC](#) and [CNPE](#) are collaborating with [ITER ORGANIZATION](#) for Sector Modules Sub-Assembly (SMSA) Project, that was already awarded to a Consortium led by [CNPE](#). Thanks to its technical experience, [SIMIC](#) has been selected by [CNPE](#) as Subcontractor to support [CNPE](#) in the on-site mechanical installation works.

This collaboration between [CNPE](#) and [SIMIC](#) is poised to make significant contributions to the global advancement of nuclear energy, reinforcing both companies' roles in the safe and sustainable development of civil nuclear technologies to reach the #netzero and the #energytransition.
